

# Predict issues, prevent downtime and protect assets with Grundfos Connect

Get peace of mind with full visibility of all your water infrastructure equipment and real-time data on current performance. Anytime, anywhere.

Getting a complete overview of all your water infrastructure equipment can be both time-consuming and challenging. Without access to data, there's no visibility. And when there's no visibility, there's no chance to act proactively, prioritize tasks and prevent unnecessary issues from happening.

Grundfos Connect changes that. It's a simple and secure cloud-based platform that lets you know what is happening with your equipment at any time, from anywhere. You will get notifications when anything is out of the ordinary, allowing you to predict issues and plan your maintenance accordingly.

## Key Benefits

### Peace of mind with real-time asset monitoring

Enjoy full visibility of your assets and access real-time performance data anytime, anywhere.

### Minimize downtime with automatic notifications

Take action before it's too late and secure operational performance.

### Optimize your maintenance thanks to personalized reports

Enjoy customized data at a frequency you decide.

### Simple, quick setup with out-of-the-box, cloud-based solution

Get an easy-to-use solution without any costly hardware or installations.

### Prevent environmental damage and protect communities

Stay one step ahead at all times and keep your systems running 24/7.

### Keep livestock, crops and sports turf safe

Say goodbye to water shortages, ruined harvests and damaged grass.

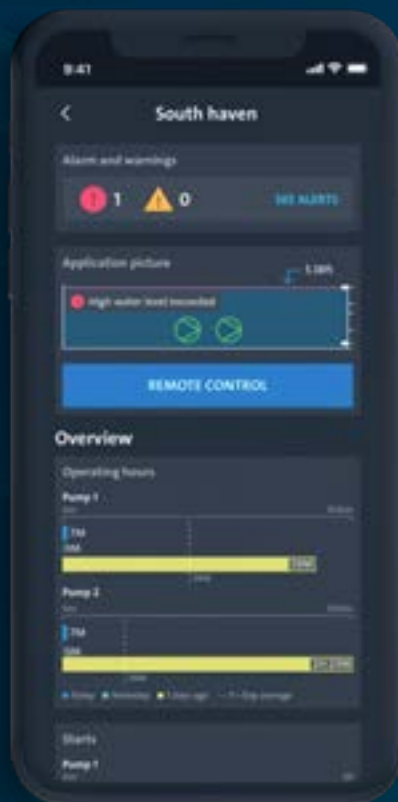

**GRUNDFOS** 

Possibility in every drop

# Monitor connected assets anytime, anywhere, from any device

- **Optimize your operational costs**  
Less need for travel and on-site inspections.
- **Full performance overview**  
See how much energy your connected assets use.
- **Low starting costs**  
Little investment required to get started.
- **Increase operational efficiency**  
Real-time monitoring of system performance.

- **Data-driven decision-making**  
Prioritize and make decisions based on actual system data.
- **Instant notifications**  
Relevant personnel are immediately alerted by SMS and email when action is required.
- **Stable and secure data platform**  
High data security and system reliability.
- **Maximize performance and customer satisfaction**  
Improved network performance leads to more satisfied customers.
